GLIGORCO GLIGOROV

Full-Stack Developer · Backend Engineer · Mobile & Automation Specialist

Skopje, North Macedonia · +389 78 875 888 · ggligorov1709@yahoo.com · gligorcogligorov.vercel.app

PROFESSIONAL SUMMARY

Results-driven Full-Stack Developer with 3+ years of experience building production-grade systems across backend automation, mobile applications, and enterprise e-commerce platforms. Proven track record of architecting complex vendor integration pipelines, AI-powered content workflows, and real-time web applications from concept to production deployment. Experienced in integrating LLMs and GPT-4 into real-world agentic pipelines that operate at scale — processing 10,000+ records daily with automated quality control, error recovery, and structured logging. Proficient in leveraging AI-assisted development tools (Cursor, Claude Code) to ship high-quality software faster without sacrificing code ownership. Passionate about solving hard problems, designing reliable systems, and contributing meaningful impact from day one.

TECHNICAL SKILLS

Mobile Development React Native, Expo, TypeScript, React Navigation, Zustand, NativeWind

Frontend React.js, Next.js, Vue.js, TypeScript, Tailwind CSS, JavaScript, HTML5, CSS3

Backend Node.js, Express.js, PHP, Laravel, Java Spring Boot, .NET, REST API design, Microservices, WebSockets, Socket.io

Databases PostgreSQL, MySQL, SQLite, Supabase, Neon, Prisma ORM

Automation & DevOps Node-RED, n8n, AWS (S3, Lambda), Git, GitHub, Graylog, Docker, Vercel, Railway

AI & LLM GPT-4 API integrations, Vercel AI SDK, prompt engineering, schema-constrained structured output, agentic workflow design, RAG pipelines, vector databases, AI-assisted development (Cursor, Claude Code)

E-commerce WordPress, WooCommerce, Shopify, OpenCart, Mirakl

PROFESSIONAL EXPERIENCE

Senior Software Engineer · BrandsGateway — Remote

April 2023 – Present

- Architected and maintained enterprise B2B e-commerce platform managing 15+ international vendor integrations across Europe
- Developed automated product synchronization system processing 10,000+ products daily using Node-RED workflows, reducing manual data entry by 95%
- Built custom WooCommerce REST API integrations for real-time inventory management and order automation with multiple vendor systems
- Built an agentic AI content pipeline using GPT-4 within Node-RED automating product title and description generation across 10,000+ SKUs, with prompt versioning, category-aware classification logic, and automated quality output
- Implemented comprehensive logging infrastructure using Graylog, improving system monitoring and reducing debugging time by 60%
- Built product version history system with S3-backed versioning and SQLite tracking, achieving ~2,000 records/second batch processing
- Integrated Slack notification systems for automated alerts on import failures, stuck processes, and system errors
- Designed intelligent data validation and transformation pipelines processing 15+ vendor feeds with schema enforcement, automated error detection, and self-healing fallback logic

Technologies: *PHP, Laravel, WordPress, WooCommerce, Node-RED, MySQL, PostgreSQL, AWS, Graylog, GPT-4, Node.js*

Key Achievements:

- Replaced manual product import processes with fully automated solutions, saving 20+ hours/week
- Successfully integrated 8+ vendor APIs with different authentication methods (OAuth, API keys, tokens)
- Built custom admin dashboards for product management and vendor performance tracking
- Maintained 99.5% system uptime through proactive monitoring, error handling and lock/completion tracking systems

CERTIFICATIONS & TRAINING

- 8x Playmakers Network – Certificate of Membership | 8x | October 2026 — View certificate
- Vue.js Training – Certificate of Completion | EESTEC Academy | September 2021

"One of the most capable, reliable and genuinely driven engineers I have had on my team." — Read the full letter

PROJECTS

Pact – Social Accountability Habit App

Full-Stack · Mobile · AI · 2026

- Designed and shipped a social habit app end-to-end in a 2-week 8x Playmakers trial — crews of up to eight share one habit, check in daily with a photo of that day's challenge, and a day counts only when the whole crew is in
- Architected a TypeScript monorepo where an Expo / React Native app and a Next.js 15 API share one Zod contract — every read and write goes through a versioned API, and Supabase handles identity only
- Built all day math on the server in each pact's own time zone (DST-safe) — chains, streaks, records, late joins, ties and the final loser, all pinned by tests
- Designed a non-blocking AI judge — check-ins return instantly as pending while the verdict runs in the background on Groq, with Gemini as fallback; evaluated on real photos (17 of 19 agreed)
- Shipped public results pages with server-rendered share cards and link previews, in-app nudges, crew messages and an activity feed; 100+ analytics events tracked in PostHog, Sentry on mobile

Technologies: *Expo SDK 55, React Native, expo-router, NativeWind, TanStack Query, Next.js 15, React 19, Prisma 6, Supabase (Auth + Postgres), Zod, Groq, Gemini, PostHog, Sentry, Jest*

GitHub: github.com/GligorcoGligorov/Pact

FitCheck – AI Wardrobe Stylist

Full-Stack · AI/LLM · 2026

- Architected and shipped a production multilingual AI stylist end-to-end — Next.js 16 App Router, PostgreSQL (Neon) via Prisma 7 driver adapters, Vercel Blob object storage, deployed on Vercel with CI/CD from GitHub
- Designed a two-pass AI architecture that cut inference cost ~10× — a vision model tags each garment once at upload, and the stylist then reasons over a compact text catalogue instead of images, returning three scored, reasoned outfits per call
- Eliminated LLM hallucination in garment naming by constraining the vision model to a closed enum vocabulary and composing display names in code, including adjective–noun gender agreement for German and Macedonian — verified across 5,673 colour × garment × language combinations
- Built a rolling-window quota system (3 generations per closet per day) with a per-network backstop that survives cookie clearing — IP addresses stored only as keyed SHA-256 digests, never raw, for GDPR compliance
- Hardened for serverless execution limits: per-call AbortSignal deadlines so a slow provider never costs a user their upload, and budgeted batch processing with client-driven continuation instead of unbounded loops
- Built an owner's analytics dashboard tracking the activation funnel, per-call token spend, and recognition failure rate, with automated-traffic filtering so the figures reflect real users; diagnosed and fixed a 4× latency regression by colocating functions with the database region (1.1s → 0.25s per page)

Technologies: *Next.js 16, React 19, TypeScript, Tailwind CSS v4, Prisma 7, PostgreSQL (Neon), Vercel Blob, Vercel AI SDK v7, Groq, Zod, sharp*

RentEase – Property Rental Platform

Full-Stack · Real-Time · 2026

- Architected and shipped a full-stack property rental platform from scratch — React + TypeScript frontend, Node.js/Express REST API, PostgreSQL (Supabase), deployed to Vercel and Railway with CI/CD via GitHub
- Implemented real-time bidirectional messaging between renters and owners via Socket.io with persistent message history and room-based architecture
- Built complete booking system with PostgreSQL OVERLAPS-based date conflict detection, automatic price calculation, and full status lifecycle management (pending → confirmed/cancelled/completed)
- Designed JWT auth flow with access + refresh token rotation, bcrypt hashing, and rate limiting on auth routes to prevent brute force attacks
- Built reviews system, property search/filter with pagination, and role-based dashboard for owners and renters with 6 seeded properties with real imagery

Technologies: *React, TypeScript, Vite, Tailwind CSS, Node.js, Express.js, PostgreSQL, Supabase, Socket.io, Zustand, Vercel, Railway*

Live: assess-xi.vercel.app | **GitHub:** github.com/GligorcoGligorov/assess

CodeSensei – AI-Powered Coding Interview Prep Platform

Full-Stack · AI/LLM · 2026

- Architected and shipped a production-grade coding interview prep platform end-to-end — React + TypeScript frontend, Node.js/Express REST API backend, and Supabase (PostgreSQL) database, deployed to Vercel and Railway with CI/CD via GitHub
- Designed and integrated a GPT-4 powered agentic mentor system that analyzes the user's current code and attempt history to deliver progressive, context-aware hints — engineered with prompt versioning, attempt-count logic, and IP-based rate limiting (10 requests/hour) to prevent API abuse
- Built an in-browser code execution engine using Monaco Editor (the VS Code engine) with a sandboxed test runner that evaluates user submissions against automated test cases and returns structured pass/fail results with full input/output comparison across 8 coding challenges

– Designed and seeded a normalized Supabase schema for challenges, examples, starter code, and a ranked leaderboard — fetched in real-time with skeleton loading states, filter-by-difficulty, and optimistic UI patterns for a seamless user experience

Technologies: *React, TypeScript, Vite, Tailwind CSS, Node.js, Express.js, OpenAI GPT-4 API, Supabase (PostgreSQL), Monaco Editor, Vercel, Railway*

VitalLink – Remote Patient Monitoring App

Mobile · Healthcare · 2026

– Built full-stack React Native + Expo healthcare platform connecting patients with doctors through real-time vitals monitoring, medication management, and secure messaging
– Implemented role-based authentication (patient / doctor) using Supabase Auth with profile-based routing — patients see vitals/meds dashboards, doctors see patient management screens
– Built doctor-patient connection system with request/accept flow using a dedicated junction table and Row Level Security policies in Supabase
– Integrated real-time Supabase database for vitals logging, medication tracking, and live chat between patients and doctors
– Architected Zustand global state management with async Supabase queries, session persistence via expo-secure-store, and React Navigation (stack + bottom tabs)
– Designed complete UI system with 13 screens: auth flow, patient vitals/meds/messages/profile, doctor dashboard/requests/patient detail — professional mockups included in README

Technologies: *React Native, Expo SDK 54, TypeScript, Supabase (Auth + RLS + Realtime), Zustand, React Navigation, expo-secure-store*

GitHub: github.com/GligorcoGligorov/VitalLink

MediTrack – Healthcare Medication Reminder App

Mobile · 2026

– Built full-stack React Native mobile app with Expo and TypeScript featuring user authentication, medication tracking, and daily reminders
– Integrated Supabase for real-time PostgreSQL database, row-level security, and secure session management with expo-secure-store
– Implemented Zustand global state management, React Navigation (stack + bottom tabs), and push notifications via expo-notifications
– Configured ESLint + Prettier for production-grade code quality and clean architecture with reusable component libraries and custom hooks

Technologies: *React Native, Expo, TypeScript, Supabase, Zustand, React Navigation, NativeWind, expo-notifications*

GitHub: github.com/GligorcoGligorov/MediTrack

Portfolio Website – Personal Branding

Frontend · 2024

– Designed and developed responsive personal portfolio website showcasing projects and skills
– Implemented modern UI/UX principles with smooth animations and mobile-first design
– Deployed on Vercel with continuous integration

Technologies: *React.js, Next.js, CSS3, Vercel*

Live: gligorcogligorov.vercel.app

ConcertTickets – Event Ticketing Platform

Full-Stack · 2023

– Built web application for selling event and movie tickets using Clean Architecture (Onion Architecture)
– Implemented secure payment integration and ticket verification system
– Designed scalable database schema supporting multiple event types and venues

Technologies: *.NET, ASP.NET Core, Entity Framework, SQL Server*

GitHub: github.com/GligorcoGligorov/ConcertTickets

TinexChain – Retail Inventory Management System

Backend · 2023

– Developed inventory management system for retail chain with procurement and delivery tracking
– Created automated reorder point calculations and supplier management features
– Built RESTful APIs for mobile and web client integration

Technologies: *Java Spring Boot, PostgreSQL, REST API*

GitHub: github.com/GligorcoGligorov/Tinex-Store-Chain

BookApp – E-commerce Platform

Full-Stack · 2023

– Built online bookstore with shopping cart, payment processing, and order management
– Implemented user authentication, role-based access control, and admin panel

Technologies: *Java Spring Boot, React.js, PostgreSQL, REST API*

GitHub: github.com/GligorcoGligorov/Book-Application

EDUCATION

Bachelor of Science in Information Science — Applied Information Technologies · **FINKI, Ss. Cyril and Methodius University, Skopje** *2020 – 2024*

- Graduated with GPA 8.68 / 10 — 241 ECTS credits, Qualification Level VI-A
- Degree issued: Skopje, 26.3.2025 — Diplomat Engineer in Information Science and Computer Engineering
- Relevant Coursework: Advanced Web Design, Database Systems, Electronic Commerce, Integrated Systems, Software Architecture
- Teaching Assistant: Laboratory Teaching Assistant for Computer Science courses (October 2023 – October 2025) — mentored students in programming fundamentals, web development, and software engineering

PROFESSIONAL ATTRIBUTES

- AI-augmented developer — uses Cursor and Claude to ship faster without losing ownership or quality of the code
- Strong system design instinct — thinks in pipelines, failure modes, and scalability before writing the first line
- Fast learner with strong ability to adapt to new technologies, frameworks, and domains
- Excellent problem-solving skills with attention to detail, code quality, and long-term maintainability
- Strong communication skills for client interaction, vendor coordination, and cross-functional teamwork
- Self-motivated, works well independently, and thrives under tight deadlines and high-pressure environments
