SUMMARY

Backend engineer who builds AI systems that hold up in production. For 3+ years I have been the sole backend engineer at BrandsGateway, a B2B luxury fashion marketplace, where I designed and own a GPT-4 agentic pipeline that processes 10,000+ products every day across 15+ vendor integrations. I built it to survive real-world failure: self-healing recovery, per-product state isolation, versioned rollback and full observability.

Outside work I take products from idea to live users on my own. In 2026 alone I shipped an AI lead-discovery SaaS, an AI wardrobe stylist, a social habit app, an AI interview-prep platform, a real-time rental marketplace and two healthcare apps, across web, mobile and AI. I treat cost, security and reliability as features, not afterthoughts, and I use Cursor and Claude Code every day to move fast while owning every line of the code. Give me a hard problem and the whole system, and I will take it to production.

10,000+
products a day through the AI pipeline I own

15+
vendor integrations built and run in production

20+ hrs
saved every week, 95% less manual data entry

99.5%
uptime with self-healing recovery

EXPERIENCE

Senior Software Engineer · BrandsGateway

April 2023 – Present · Remote

Sole backend engineer for a B2B luxury fashion e-commerce marketplace serving retailers across Europe

- **AI content pipeline.** Built an agentic GPT-4 pipeline in Node-RED that writes product titles and descriptions for 10,000+ SKUs, with prompt versioning, category-aware classification and automated quality control.
- **Reliability by design.** Engineered a self-healing Watchdog that recovers stuck jobs, per-product keyed state isolation and lock/completion tracking, keeping the platform at 99.5% uptime.
- **Vendor platform.** Architected and maintain the enterprise B2B platform behind 15+ international vendor integrations across Europe, including 8+ vendor APIs with different auth methods (OAuth, API keys, tokens).
- **Automation at scale.** Replaced manual product imports with automated synchronization for 10,000+ products a day, cutting manual data entry by 95% and saving the team 20+ hours every week.
- **Data quality.** Designed validation and transformation pipelines for every vendor feed, with schema enforcement, automated error detection and self-healing fallback logic.
- **Safe rollback.** Built product version history with S3-backed versioning and SQLite tracking, processing about 2,000 records per second, so any bad import can be reverted in minutes.
- **Observability.** Rolled out Graylog logging across the platform, cutting debugging time by 60%, and wired Slack alerts for failed imports, stuck processes and system errors.
- **Commerce integrations.** Wrote custom WooCommerce REST API integrations for real-time inventory and order automation across multiple vendor systems.
- **Internal tools.** Built admin dashboards for product management and vendor performance tracking.

Technologies: PHP, Laravel, WordPress, WooCommerce, Node-RED, Node.js, MySQL, PostgreSQL, AWS, Graylog, GPT-4

Laboratory Teaching Assistant · **FINKI, Ss. Cyril and Methodius University** October 2023 – October 2025

- Taught lab sessions for Computer Science courses and mentored students in programming fundamentals, web development and software engineering.

REFERENCE & CERTIFICATIONS

REFERENCE

"One of the most capable, reliable and genuinely driven engineers I have had on my team."

Trajce (TJ) Kralev, Fractional CTO, BrandsGateway

CERTIFICATIONS

8x Playmakers Network

Certificate of Membership · 8x · October 2026

View certificate

Vue.js Training

Certificate of Completion · EESTEC Academy · September 2021

PROJECTS

Signal · AI Buyer-Intent Lead Discovery SaaS

Full-Stack · AI/LLM · SaaS · 2026

Finds people publicly asking for a product like yours, scores how ready they are to buy, and drafts the reply

- Architected and shipped a production SaaS end to end that monitors Hacker News, Bluesky, GitHub and Stack Overflow, scores each post's buying intent with an LLM and drafts a reply.
- Built a TypeScript monorepo (Next.js 15 web app, ingestion worker, shared scoring engine) on Supabase Postgres with row-level security and column-level grants, 85+ automated tests and hourly serverless scans on GitHub Actions.
- Designed a cost-bounded AI pipeline: one fetch per source shared by all customers, intent prefiltering with bot and noise filters, batched Gemini scoring with structured output, and a heuristic fallback so no single failure ever stops a run.
- Hardened it for production with global and per-user daily LLM caps, a rate-limited website reader with SSRF protection, an open-redirect fix and key rotation; seller and competitor posts are filtered by three rule layers backed by regression tests.
- Built the founder dashboard: paste a website and the AI drafts keywords and competitors, then get signal-strength scores, a lead pipeline, a feedback loop and Telegram alerts for hot leads. By design it never posts on the user's behalf.

Technologies: Next.js 15, React 19, TypeScript, Tailwind CSS v4, Supabase (Postgres, Auth, RLS), Gemini API, Node.js, GitHub Actions, Vitest, PGlite, Vercel

Live: signal-blond-phi-13.vercel.app

FitCheck · AI Wardrobe Stylist

Full-Stack · AI/LLM · 2026

A multilingual AI stylist that turns photos of your closet into scored outfits

- Architected and shipped the product end to end: Next.js 16 App Router, PostgreSQL (Neon) through Prisma 7 driver adapters and Vercel Blob storage, deployed on Vercel with CI/CD from GitHub.
- Cut inference cost about 10x with a two-pass AI design: a vision model tags each garment once at upload, then the stylist reasons over a compact text catalogue instead of images and returns three scored, reasoned outfits per call.
- Eliminated LLM hallucination in garment names by constraining the vision model to a closed vocabulary and composing display names in code, with correct adjective-noun gender agreement for German and Macedonian, verified across 5,673 colour × garment × language combinations.

- Built a rolling-window quota system (3 generations per closet per day) with a per-network backstop that survives cookie clearing; IP addresses are stored only as keyed SHA-256 digests, never raw, for GDPR compliance.
- Hardened it for serverless limits with per-call AbortSignal deadlines, so a slow provider never costs a user their upload, and batched processing with client-driven continuation instead of unbounded loops.
- Built an owner analytics dashboard tracking the activation funnel, per-call token spend and recognition failure rate, with automated-traffic filtering so the numbers reflect real users; found and fixed a 4x latency regression by colocating functions with the database region (1.1s to 0.25s per page).

Technologies: Next.js 16, React 19, TypeScript, Tailwind CSS v4, Prisma 7, PostgreSQL (Neon), Vercel Blob, Vercel AI SDK v7, Groq, Zod, sharp

Live: thefitcheck.vercel.app

Pact · Social Accountability Habit App

Full-Stack · Mobile · AI · 2026

Built and shipped in a 2-week 8x Playmakers trial

- Designed and shipped a social habit app end to end: crews of up to eight share one habit, check in daily with a photo of that day's challenge, and a day counts only when the whole crew is in.
- Architected a TypeScript monorepo where an Expo / React Native app and a Next.js 15 API share one Zod contract. Every read and write goes through a versioned API, and Supabase handles identity only.
- Built all day math on the server in each pact's own time zone (DST-safe): chains, streaks, records, late joins, ties and the final loser, all pinned by tests.
- Designed a non-blocking AI judge: check-ins return instantly as pending while the verdict runs in the background on Groq with Gemini as fallback, evaluated on real photos with 17 of 19 verdicts matching human judgment.
- Shipped server-rendered public share cards and link previews, in-app nudges, crew messages and an activity feed, with 100+ analytics events tracked in PostHog and Sentry monitoring on mobile.

Technologies: Expo SDK 55, React Native, expo-router, NativeWind, TanStack Query, Next.js 15, React 19, Prisma 6, Supabase (Auth, Postgres), Zod, Groq, Gemini, PostHog, Sentry, Jest

GitHub: github.com/GligorcoGligorov/Pact

CodeSensei · AI-Powered Coding Interview Prep Platform

Full-Stack · AI/LLM · 2026

An AI mentor that coaches you through coding challenges instead of handing you the answer

- Architected and shipped a production-grade platform end to end: React + TypeScript frontend, Node.js/Express REST API and Supabase (PostgreSQL), deployed to Vercel and Railway with CI/CD from GitHub.
- Designed a GPT-4 agentic mentor that analyzes the user's current code and attempt history to give progressive, context-aware hints, with prompt versioning, attempt-count logic and IP-based rate limiting (10 requests/hour) against API abuse.
- Built an in-browser code execution engine on Monaco Editor (the VS Code engine) with a sandboxed test runner that checks submissions against automated test cases and returns structured pass/fail results with full input/output comparison across 8 challenges.
- Designed a normalized Supabase schema for challenges, examples, starter code and a ranked leaderboard, fetched in real time with skeleton loading, difficulty filters and optimistic UI updates for a seamless experience.

Technologies: React, TypeScript, Vite, Tailwind CSS, Node.js, Express.js, OpenAI GPT-4 API, Supabase (PostgreSQL), Monaco Editor, Vercel, Railway

Live: codesensei-three.vercel.app **GitHub:** github.com/GligorcoGligorov/CodeSensei

RentEase · Property Rental Platform

Full-Stack · Real-Time · 2026

A rental marketplace with live messaging and conflict-free booking

- Architected and shipped a full-stack rental platform from scratch: React + TypeScript frontend, Node.js/Express REST API and PostgreSQL (Supabase), deployed to Vercel and Railway with CI/CD from GitHub.
- Implemented real-time two-way messaging between renters and owners with Socket.io, persistent message history and a room-based architecture.
- Built a complete booking system with PostgreSQL OVERLAPS-based conflict detection that makes double bookings impossible, automatic price calculation and a full status lifecycle (pending, confirmed, cancelled, completed).
- Designed a secure JWT auth flow with access and refresh token rotation, bcrypt hashing and rate limiting on auth routes to block brute-force attacks.
- Built a reviews system, property search and filters with pagination, and role-based dashboards for owners and renters, seeded with 6 properties and real imagery.

Technologies: React, TypeScript, Vite, Tailwind CSS, Node.js, Express.js, PostgreSQL, Supabase, Socket.io, Zustand, Vercel, Railway

Live: assess-xi.vercel.app **GitHub:** github.com/GligorcoGligorov/assess

VitalLink · Remote Patient Monitoring App

Mobile · Healthcare · 2026

Connects patients and doctors through live vitals, medication tracking and secure chat

- Built a full React Native + Expo healthcare platform connecting patients with doctors through real-time vitals monitoring, medication management and secure messaging.
- Implemented role-based authentication (patient / doctor) with Supabase Auth and profile-based routing: patients see vitals and medication dashboards, doctors see patient management screens.
- Built a doctor-patient connection system with a request / accept flow, a dedicated junction table and Row Level Security policies so each doctor sees only their own patients.
- Integrated a real-time Supabase database for vitals logging, medication tracking and live chat between patients and doctors.
- Architected Zustand global state with async Supabase queries, session persistence via expo-secure-store and React Navigation (stack + bottom tabs).
- Designed the complete UI across 13 screens (auth flow, patient vitals, medications, messages and profile, doctor dashboard, requests and patient detail), with professional mockups in the README.

Technologies: React Native, Expo SDK 54, TypeScript, Supabase (Auth, RLS, Realtime), Zustand, React Navigation, expo-secure-store

GitHub: github.com/GligorcoGligorov/VitalLink

MediTrack · Healthcare Medication Reminder App

Mobile · 2026

Helps patients never miss a dose

- Built a full-stack React Native app with Expo and TypeScript featuring user authentication, medication tracking and daily reminders.
- Integrated Supabase for a real-time PostgreSQL database with row-level security and secure session management through expo-secure-store.
- Implemented Zustand global state, React Navigation (stack + bottom tabs) and push notifications via expo-notifications.
- Set up ESLint and Prettier for production-grade code quality, with a clean architecture of reusable component libraries and custom hooks.

Technologies: React Native, Expo, TypeScript, Supabase, Zustand, React Navigation, NativeWind, expo-notifications

GitHub: github.com/GligorcoGligorov/MediTrack

FOUNDATIONS · 2023 – 2024

ConcertTickets · Event Ticketing Platform

Full-Stack · 2023

- Built a web application for selling event and movie tickets on Clean Architecture (Onion Architecture).
- Implemented secure payment integration and a ticket verification system.
- Designed a scalable database schema supporting multiple event types and venues.

Technologies: .NET, ASP.NET Core, Entity Framework, SQL Server

GitHub: github.com/GligorcoGligorov/ConcertTickets

TinexChain · Retail Inventory Management System

Backend · 2023

- Developed an inventory management system for a retail chain with procurement and delivery tracking.
- Built automated reorder-point calculations and supplier management features.
- Designed RESTful APIs for mobile and web client integration.

Technologies: Java Spring Boot, PostgreSQL, REST API

GitHub: github.com/GligorcoGligorov/Tinex-Store-Chain

BookApp · E-commerce Platform

Full-Stack · 2023

- Built an online bookstore with shopping cart, payment processing and order management.
- Implemented user authentication, role-based access control and an admin panel.

Technologies: Java Spring Boot, React.js, PostgreSQL, REST API

GitHub: github.com/GligorcoGligorov/Book-Application

Portfolio Website · Personal Branding

Frontend · 2024

- Designed and developed a responsive personal portfolio showcasing projects and skills.
- Applied modern UI/UX principles with smooth animations and mobile-first design.
- Deployed on Vercel with continuous integration.

Technologies: React.js, Next.js, CSS3, Vercel

Live: gligorcogligorov.vercel.app

TECHNICAL SKILLS

AI & LLM	GPT-4 / OpenAI API, Gemini, Groq, Vercel AI SDK, agentic workflow design, prompt engineering, schema-constrained structured output, RAG pipelines, vector databases, AI-assisted development (Cursor, Claude Code)
Backend	Node.js, TypeScript, Express.js, PHP, Laravel, Java Spring Boot, Kotlin, .NET / ASP.NET Core, REST API design, microservices, WebSockets, Socket.io
Frontend	React, Next.js, Vue.js, TypeScript, Tailwind CSS, JavaScript, HTML5, CSS3
Mobile	React Native, Expo, expo-router, React Navigation, Zustand, NativeWind
Databases	PostgreSQL, MySQL, SQLite, SQL Server, Supabase (Auth, RLS, Realtime), Neon, Prisma ORM, Entity Framework
Automation & DevOps	Node-RED, n8n, AWS (S3, Lambda), Docker, Git, GitHub Actions CI/CD, Vercel, Railway, Graylog, Sentry, PostHog
E-commerce	WordPress, WooCommerce, Shopify, OpenCart, Mirakl
Testing & Quality	Vitest, Jest, ESLint, Prettier, Zod

HOW I WORK

AI-augmented, fully accountable
I use Cursor and Claude Code daily to ship faster, without giving up ownership or quality of the code.

Systems thinker
I think in pipelines, failure modes and scale before writing the first line.

Fast to adapt
I pick up new technologies, frameworks and domains quickly, from luxury e-commerce to healthcare and developer tools.

Built to last
Attention to detail, clean code and long-term maintainability come first.

Clear communicator
Comfortable working with clients, coordinating vendors and collaborating across teams.

Self-driven
I work well independently and deliver under tight deadlines and pressure.

EDUCATION

Bachelor of Science in Information Science · Applied Information Technologies

2020 – 2024

FINKI, Ss. Cyril and Methodius University, Skopje

- Graduated with GPA 8.68 / 10 · 241 ECTS credits · Qualification Level VI-A
- Diploma: Engineer in Information Science and Computer Engineering, issued in Skopje on 26.3.2025
- Relevant coursework: Advanced Web Design, Database Systems, Electronic Commerce, Integrated Systems, Software Architecture

LANGUAGES

Macedonian: native | **English**: professional working proficiency
